# DEFEND

## Improve performance and protect against unauthorized access.

**Sec**
Managed Security Services

Cybercrime and ransomware are out of control. Simple statistics tell the story: traditional cybersecurity isn't enough and hasn't evolved along with threats. A modern, integrated approach can help you safeguard critical assets, follow regulatory requirements, and adapt to current and future cyber threats.

11:11 Application and Zero Trust Services — part of 11:11 Managed Security Services — allow you to mitigate threats, protect sensitive data, and maintain business continuity as part of a layered approach to cybersecurity. Leveraging Cloudflare's global connectivity cloud technology, you can securely connect users and applications and increase performance. Available across edge locations in more than 200 cities and countries, you'll always be within 50 milliseconds from 95% of the world's connected population.

## Optimize performance, reliability, and scalability.

With 11:11 Application and Zero Trust Services, improve the security, performance, and reliability of your organization's external-facing infrastructure such as websites, applications, and application programming interfaces (APIs). Streamline your network performance, protect against unauthorized access, and enforce global application and user policies.

In addition, you can also opt for premium management for a complete, white-glove experience. This add-on service includes guided onboarding, continual change management, incident support, and an upgraded service-level agreement.

# Improve connectivity while you minimize cyber risks.

**Sec**
Managed Security Services

## Choose from the following solutions, based on your business needs.

### Business and Application Services:

**Web Application Firewall (WAF):**
Protect web applications and APIs from cyberattacks such as cross-site scripting, SQL injections, and other zero-day exploits.
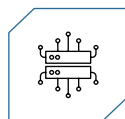

**Domain Name Services (DNS):**
Protect public facing applications with advanced DNS Security features to prevent malicious redirects and DNS hijacks.

**Layer 7 Distributed Denial of Service (DDoS) Protection:**
Defend web applications from DDoS attacks and ensure your internet-based applications and services are available and reliable.

**Content Delivery Network (CDN):**
Improve performance, reduce bandwidth, and deliver a better web experience through content caching, delivered from the closest global edge server.

### Zero Trust Services:
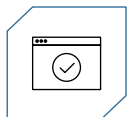

**Remote Browser Isolation (RBI):**
Improve security and minimize the risk of malware and data breaches by isolating web browsing activities from your internal network.
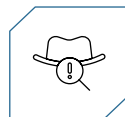

**Data Loss Prevention (DLP):**
Prevent unauthorized access to sensitive payment and personal identifiable information (PII) with granular controls that block data sharing.

**Cloud Access Security Broker (CASB):**
Enforce security policies, monitor activity, and protect data with an access point between users and cloud providers.

**Cloud Email Security:**
Defend against phishing, malware, and other email threats with advanced detection, protection, and real-time analysis of email content and sender behavior.

**Secure Web Gateway (SWG):**
Protect company data, increase user VPN performance, and enforce a consistent internet security policy through a global internet edge.

## Need help transforming other areas of your environment?

11:11 Systems has experts, consulting services, and solutions ready to help strengthen your entire organization so you can truly effect digital transformation across your network. With the right solutions and professional services to assist your internal IT teams, we can help you modernize, protect, and manage your entire environment from our resilient cloud platform.
