Without a doubt, the future of education resides in the cloud.

Today's classroom environment is no longer just a physical location but an experience designed around the needs of students and faculty. Today, everything from professional research to pupil homework to live video can be accessed, shared, and managed online. In this way, remote learning and virtual classrooms will provide new learning options and capabilities never possible in traditional classrooms.

But as more classrooms become decentralised in order to accommodate and reach new audiences, a concerted effort needs to be made to ensure student and faculty data access and availability are prioritised. At the same time, as recent data suggests that the UK Education sector is at risk for increased cybercrime frequency and impact, protecting and securing student and faculty data is paramount. With a need for high availability and resiliency to support remote learning, moving to the cloud requires IT professionals to consider many technology variables to provide for an optimal learning experience.

To help these institutions transform for the future of learning and remote access without compromising the critical capabilities needed for 24/7 access and data protection, 11:11 Cloud has developed a portfolio of cloud services designed to deliver a unique combination and balance of performance, protection, and security delivered on a proven technology platform.

11:11 CLOUD FOR EDUCATION

11:11 Systems has a long history of developing industry-specific solutions that meet the needs of education and learning professionals with unique performance, security, and cost requirements. Today, our portfolio consists of the following secure cloud services that can be individually designed to meet your access and security requirements:

11:11 Cloud (Public/Private/Hybrid Cloud)

Highest application security and performance platform for remote and online learning and development. Public, private, and hybrid clouds available depending on use case and other requirements.

11:11 Backup for Cloud

Backup and recovery to protect against internal and external cybersecurity threats, including ransomware, accidental deletions, and human error. 11:11 Backup for Cloud is included with Secure Public and Private Cloud.

11:11 DRaaS (for Veeam or Zerto)

Security- and compliance-focused disaster recovery to ensure unexpected downtime, including hardware failure, doesn't impact access and availability of applications.

11:11 Cloud Backup for Microsoft 365

Secure and compliant backup protection for institutions using Microsoft 365 data. Backup for Microsoft 365 provides the ability to store and retrieve sensitive data and files that may need protection beyond what is included in the SaaS solution.

11:11 Cloud Object Storage

Cost-efficient and secure storage for the long-term preservation of data. This includes older backups or "cold" data that needs to be kept for compliance reasons but is infrequently accessed.

EDUCATION FOCUS

Proven Technology:
VMware-based cloud designed for performance, security, and ease of use.

Zero Trust Security:
Multi-layered defence including physical, logical, process, and compliance.

No-compromise Compliance:
Dedicated compliance team to consult on specific data residency issues.

Simplified Pricing:
All-inclusive pricing to ensure forecasting is easy.

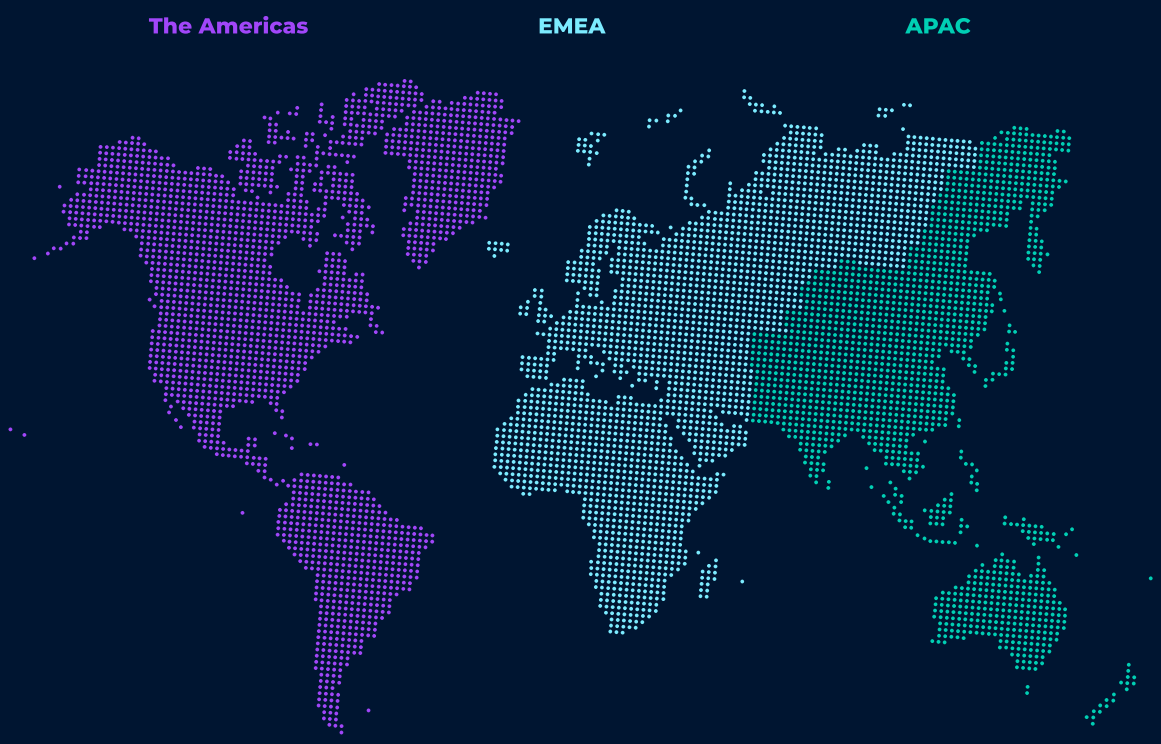

Unified Management:
Unified management across all 11:11 solutions, including IaaS, BaaS, and DRaaS.

Built-in Data Protection:
11:11 Public and Private Cloud services include backup for additional security.

Included Support:
All services include premium, 24x7x365 support.
