

RECOVER

Fight back against data breaches and cyber intrusion.

Cy-R
Cyber Recovery

Be sure you can recover from a cyberattack.

Recovering from cybercrime isn't like any other recovery. When criminals invade your network, all normal Recovery Time Objectives (RTOs) and Recovery Point Objectives (RPOs) are irrelevant. Now, the primary concerns are: Can we recover a clean copy of our data at all?

Will we be able to resume business as usual?

This is why the 11:11 Cyber Recovery Platform allows you to survive and thrive after a ransomware event, cyber threat, or other data breach. It should be an essential part of any organization's cyber recovery strategy. Because traditional disaster recovery is simply not enough in the wake of most cyberattacks. Which is why we've put together the most comprehensive solution to provide a seamless path toward cyber recovery.

We address cyber intrusion with a multi-pronged program:

- 1 IDENTIFY** the data protection requirements needed.
- 2 PROTECT** data throughout your environment.
- 3 DETECT** and address cyber intrusions.
- 4 RESPOND** to data breaches quickly.
- 5 RECOVER** in a secure, virtual clean room environment.

In the event of a cyberattack, we can deliver isolation, point-in-time data rehydration, and data decryption, if needed. Our virtual clean room and managed recovery provide expert help to automate, orchestrate, and test recovery. This air-gapped, offline recovery environment is outside your network, so you have complete assurance you can restore clean data to your production environment and resume normal operations as quickly as possible.

The 11:11 Cyber Recovery Platform is the most comprehensive program to help you fight back... and win!

Key Benefits:

Prioritize vital assets that require extra levels of protection beyond what is typical for traditional disaster recovery.

Protect valuable information with data protection best practices, including backup immutability, encryption, and more.

Quantify your cyber risk and make the case for prioritizing cyber resilience.

Address any gaps in your defenses and shield your organization from cyber intrusion with a multi-layered approach to security and recovery.

Benefit from skilled and specialized consultants, including professionals with more than 40 years of experience in cyber resilience strategies.

Stay ahead of cyber threats.

Dealing with a cyber incident is no longer a matter of *if*. It's a matter of *when*. That's why you can't leave preparation to chance. If you're unsure whether you could recover from a cyberattack, we can help your team at every step:

- Protect vital data with best-in-class technology from 11:11 Systems' alliance partners, such as Cohesity, HPE Zerto, Veeam, and more.
- Orchestrate and validate recovery in an air-gapped, offline environment outside your network.
- Investigate, remediate, and verify that workloads and data are in a known good state with automated malware scanning and integrity validation.
- Avoid reinfection from malicious code or ransomware.

Our isolated recovery environment is also available for forensics and analysis, stringent identity, and access management controls, as well as ongoing testing, validation, and readiness response. And with the 11:11 Cyber Recovery Platform, you get help from experts before, during, and after a cyber event.

Need help managing other areas of your IT environment?

11:11 Systems has experts, consulting services, and solutions ready to help strengthen your entire organization so you can truly effect digital transformation across your network. With the right solutions, consulting, and professional services to assist your internal IT teams, we can help you modernize, protect, and manage your IT from our resilient cloud platform.
