# RECOVER

Fight back against data breaches and cyber intrusion.

CYBER INCIDENT RECOVERY

## Could you recover from a ransomware attack?

Recovering from cybercrime isn't like any other recovery. When criminals invade your network, your primary concerns are: Can we recover any clean copy of our data? Will we ever be able to resume business as usual? After a data intrusion, recovery point objectives are entirely driven by your outcomes from forensic analysis. You'll also need to recover multiple copies of your data if forensic analysis isn't able to quickly find a clean recovery point, so your recovery time objectives are entirely dependent on how long this process takes.

This is why 11:11 Cyber Incident Recovery is an essential solution for any organization dealing with a cyber intrusion. Traditional disaster recovery plans are not enough to address data breaches. Which is why we've put together the most comprehensive cybercrime recovery solution available in the market today.

We address cyber intrusion with a multi-pronged program:

1. **Identify** the data protection requirements needed.
2. **Protect** data throughout your environment.
3. **Detect** and address cyber intrusions.
4. **Respond** to data breaches quickly.
5. **Recover** in a way that assures data remains secure.

In the event of a cyberattack, we provide isolation, point-in-time data rehydration, and data decryption, if needed. This gives organizations the assurance that they can restore clean data to their production environments and resume normal operations as quickly as possible.

Cyber Incident Recovery

## 11:11 Cyber Incident Recovery is the most comprehensive program available to help you get your data back.

### Key Benefits:

- Prioritize vital assets that require extra levels of protection beyond what is typical for traditional disaster recovery.
- Protect valuable information with data protection best practices, including backup immutability, encryption, and more.
- Address any gaps in your defenses and shield your organization from cyber intrusion with a multi-layered approach to security.
- Benefit from skilled and specialized consultants, including professionals with more than 40 years of experience in recovery.

### In a crisis, you can rely on our expertise.

With cybercrime rising precipitously every year, you shouldn't leave preparation to chance. Analysts recommend that organizations address cyber events in their risk management strategies, no matter what their industry.

In the event your organization is hit with a data breach, 11:11 Cyber Incident Recovery experts are there at every step. We will also provide isolated recovery for forensics and analysis, stringent identity, and access management controls, as well as ongoing testing, validation, and readiness response.

### Need help managing other areas of your IT environment?

11:11 Systems has experts, consulting services, and solutions ready to help strengthen your entire organization so you can truly effect digital transformation across your network. With the right cloud, connectivity, and security solutions as well as professional services to assist your internal IT teams, we can ensure your systems and data are always running, accessible, and protected.
