RECOVER

Get seamless cloud recovery when you need it most.

DRaaS
Disaster Recovery
as a Service

Keep your business running, no matter what.

When facing an IT crisis, time is of the essence, and attention is at a premium. You simply won't have enough of either to go around. Success in these tense moments, when the alarms are sounding and your adrenaline is pumping, requires more than just the right technology. You need the right technology with a trusted, tested set of plans, processes, and procedures, so you can confidently and seamlessly keep your organization up and running.

11:11 DRaaS for Cohesity accomplishes exactly this, helping protect your business before, during, and after potentially devastating disasters and cyber attacks. By uniting the industry-leading technology and expertise of 11:11 Systems and Cohesity, our solution delivers the offsite replication, management, and monitoring you need to minimize downtime, along with a virtual cyber recovery clean room to orchestrate recovery as quickly as possible, no matter what.

Rest easy with fully managed and monitored offsite replication.

By leveraging Cohesity's advanced snapshot replication technology, 11:11 DRaaS for Cohesity allows customers to efficiently and cost-effectively, replicate mission-critical virtual machines (VMs) to an 11:11-hosted and managed target Cohesity cluster. From there, 11:11 manages your Disaster Recovery from end-to-end, so you and your team can focus on delivering business value instead of worrying about recovery.

Speed up your time to recovery following a cyber incident with Clean Room Recovery.

For situations where recovery is not enough, 11:11 DRaaS for Cohesity provides a safe and secure, isolated clean room environment to allow for rapid investigation, remediation, and verification to restore trust in both workloads and data before they are migrated back into production. This is a critical step to ensure the best chance of avoiding reinfection from malicious code or ransomware.
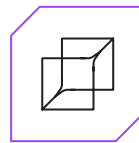

THE RESILIENT
CLOUD PLATFORM

11:11 SYSTEMS

Get simple, secure, and reliable replication and recovery from all kinds of disasters.

DRaaS
### Disaster Recovery as a Service

Key Benefits:

Rapid recovery with instant mass-restore capabilities

Tailored scalability to align with business growth

Clean room recovery for those situations that require deeper analysis of workloads and data before full recovery

Flexible, per-GB pricing model, based on actual usage

Secure offsite replication for enhanced data protection

Comprehensive management and monitoring services

DRaaS for Cohesity includes:

- Proactive and reactive DR management
- Comprehensive onboarding services
- Digital Recovery Kit (Cohesity Jump Bag) – a repository for the digital assets and tools you need to facilitate investigation, remediation, and verification prior to a recovery
- Immutable backups, offsite replication, and archiving

- Planned recovery testing and ad hoc recovery as needed
- Isolated Clean Room recovery for forensic analysis, provided for incidents and dry runs (coupled with recovery testing)
- Competitive, transparent pricing
- 24x7x365 monitoring and support
- Global availability

Need help managing other areas of your IT environment?

11:11 Systems has experts, consulting services, and solutions ready to help strengthen your entire organization so you can truly effect cyber recovery and digital transformation across your network. With the right solutions and professional services to assist your internal IT teams, we can help you modernize, protect, and manage your entire environment through our resilient cloud platform.
