

DELIVER

Provide business resilience
with fully managed recovery.

MR
Managed Recovery

Have confidence in your recovery with our application-agnostic platform.

While the right technology is key to becoming a resilient organization, having the right people and processes in place is also imperative. When you need to respond to disasters or unplanned downtime — from a cyber attack, power outage, or simple error — you need a tested and reliable plan in place to provide peace of mind and confidence in your recovery.

11:11 Managed Recovery provides an end-to-end, holistic approach to managing, maintaining, and enhancing your disaster recovery and data protection for your entire infrastructure. This can help you to minimize downtime and interruptions to your business and ensure that your applications and data are always accessible.

Our experts will work closely with teams across your organization to develop, test, and completely manage your recovery. We'll leverage automation throughout to ensure we're meeting your constantly changing business and disaster recovery requirements.

11:11 Managed Recovery will:

- Reduce human error with automated dependency mapping and recovery execution
- Conduct rigorous recovery lifecycle management assessment to provide consistent and positive recovery outcomes
- Deliver auditable, fact-based recovery testing and reporting to meet regulatory requirements and industry standards

11:11 Managed Recovery provides peace of mind that you can meet recovery objectives.

**MR**

Managed Recovery

Key Benefits:

- End-to-end, fully managed recovery planning, testing, and execution
- Strategy and design, tailored to your organization
- Complete, regular recovery testing and reporting
- Industry-leading technology and experience
- Support for many platforms across different environments
- Patented orchestration and automation
- Dedicated technical service delivery manager and 24x7x365 customer support during a recovery event

11:11 Managed Recovery includes these four phases:

**Discover**

Automated Discovery and Dependency Mapping (DDM), including detailed information-gathering about your production applications and their dependencies.

**Design**

Recovery planning and procedure blueprint for each application, system, and supporting infrastructure across your network.

**Run**

Regular recovery environment testing, following many types of cyber incident and disaster recovery scenarios.

**Manage**

Continual tracking and analysis of changes in your production environment to update recovery plans and procedures as needed.

Need help transforming other areas of your environment?

As external and internal threats continue to evolve, so does our multi-layered, integrated approach to protecting data. While there is no way to guarantee complete immunity from potential data breaches, 11:11 security experts, consulting services, and solutions are ready to help strengthen your security posture and plug potential vulnerabilities.
