

UNIFY

Expand your network's potential.

Networking and security combined into one solution.

Managing infrastructure across distributed locations, remote workforces, and multiple clouds often creates operational gaps. Relying on a patchwork of networking and security tools creates poor visibility, policy conflicts, and unnecessary complexity. That's why navigating these challenges is crucial for maintaining business continuity and efficiency. But tying your infrastructure to legacy hardware limits your agility, particularly as organizations expand their modernization efforts with cloud computing and AI.

11:11 Managed SASE combines networking and security functions into a single, unified service, so you can improve system performance, lower costs, and respond quickly to security threats. In a partnership with Cato Networks, 11:11 Managed SASE is designed to overcome the fragmentation, poor visibility, and complexity of legacy layered tools.

This trusted platform empowers IT and security teams with effortless integration, unified Zero Trust security (SSE), and advanced AI-driven threat prevention. By delivering next-generation secure networking with 99.999% availability and real-time insights through a single management console, the platform ensures your operations remain efficient, compliant, and highly secure.

NaaS

Network
as a Service

Get performance and security in one solution with 11:11 Managed SASE.

Our unified platform brings together robust performance and comprehensive security, ensuring you can protect and manage your mission-critical applications and data, simply and securely.

Key Benefits:

Advanced SD-WAN

Use application-aware routing, dynamic path selection, and intelligent traffic steering to ensure peak performance for every application. This approach allows you to direct traffic along the most effective path, guaranteeing maximum efficiency and reliability for your network.

ITSM Integration

Seamlessly integrate alerts, incident management, and change control directly into your existing IT Service Management workflows, such as ServiceNow, for a more unified operational experience.

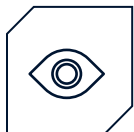

Comprehensive SASE Security Overlay

Secure your network with Zero Trust Network Access (ZTNA), Firewall as a Service (FWaaS), Secure Web Gateway (SWG), Cloud Access Security Broker (CASB), and advanced threat protection.

Global Underlay Control

Additionally, with 11:11 you gain access to a versatile, carrier-agnostic ecosystem. Get the flexibility to choose from more than 200 carriers, with a wide array of connectivity options including fiber, broadband, 5G, and satellite.

Centralized Visibility

Monitor performance, service level agreements (SLAs), and critical security metrics through our comprehensive portal, which provides a single pane of glass for your entire network.

Need help managing other areas of your IT environment?

11:11 Systems has experts, consulting services, and solutions ready to help strengthen your entire organization so you can truly effect digital transformation across your network. With the right solutions and professional services to assist your internal IT teams, we can help you modernize, protect, and manage your entire environment from our resilient cloud platform.
