RESPOND

Prevent malicious activities and security breaches where they happen.

Don’t wait for a report. Stop cybercriminals in their tracks.

End users are the top entry point for cybercriminals, especially as end users work more frequently outside the safe confines of the corporate network. Additionally, the techniques for infiltrating systems have become much more sophisticated. This all makes it increasingly difficult for traditional malware detection to keep up.

Further complicating the defense against cyberattacks is the speed at which they are able to move from the initial point of entry to the rest of the environment.

These are the key challenges that Endpoint Detection and Response (EDR) is designed to address. Utilizing next generation antivirus technology, the detection of both known and unknown malicious behaviors (including zero-day attacks) can be quickly identified and addressed.

If a suspicious process is detected, an alert can be sent and/or the execution can be blocked. Our Security Operation Center will work with you to tune the security policies to ensure nothing is missed and the proper balance is struck between security and user impact.

Customized protection to maximize security and minimize customer impact.

EDR
Managed EDR

Visibility across endpoint landscape
Complete visibility into your endpoint security strategy.

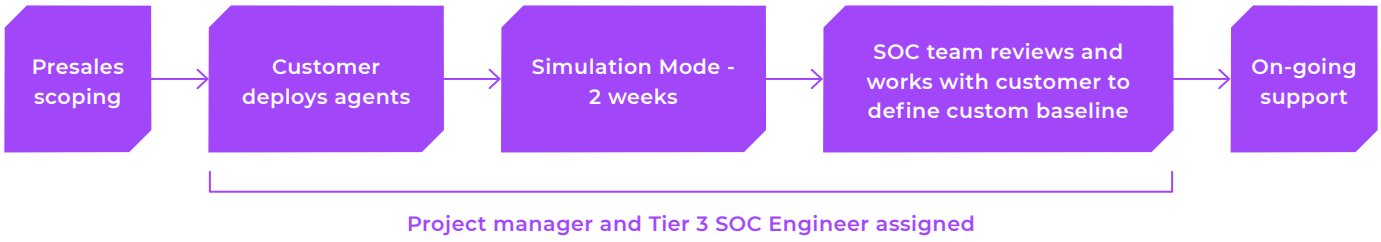
Event prioritization
Automation and correlation to prioritize threats based on your requirements.

Customizable security policies
Incorporates an organization's specific customizable security policies and playbooks to meet evolving threats and provide remediation.

Quick recovery
Real-time detection enabling your team to quickly remediate issues before they impact your organization.

24x7x365 Support
All security services include 24x7x365 support via our Security Operations Center (SOC).

Robust on-boarding process to ensure success and a quick return on investment.



Need help with other areas of your digital transformation?

11:11 Systems has security experts, consulting services, and solutions ready to help strengthen your security posture and plug potential vulnerabilities, from assessments and business impact analysis (BIA) to backup and disaster recovery services, business continuity plan development, and everything in between. We can help ensure your entire organization is cyber resilient.
