PROTECT

Improve awareness, reduce noise, and defend your business with 11:11 Managed Security Services.

Sec
Managed Security Services

Safeguard data with security backed by experts.

Cybercriminals could strike at any time—and they only need to beat your defenses once. These days, security is at the forefront of everyone's minds. With the increasing complexity of cloud infrastructures and the high sophistication of today's cybercriminals, the need for dedicated security professionals to be highly trained and constantly focused is critical. With a robust family of Managed Security Services that mirrors the National Institute of Standards and Technology (NIST) Cybersecurity Framework, 11:11 provides organizations the ability to Identify, Protect, Detect, Respond, and Recover from malicious activities.

11:11 Systems Security Solutions Overview

Our security solutions protect your network from attackers, detect active malicious activities on endpoints, and identify risks across your entire IT infrastructure. With decades of cybersecurity experience, rely on our 24x7x365 Security Operations Center (SOC) to protect your infrastructure from malicious cyber attacks.

Key Features:

- Customizable solutions for any size business
- Geographically redundant Security Operations Centers
- Enterprise class security services
- Access to certified security engineers
- Protection for any workload or network
- Extensive compliance certifications
- Improved safety, speed, and reliability of external-facing infrastructure

Our services include:

- Managed Firewall
- Continuous Risk Scanning
- Managed Security Information and Event Management (SIEM)
- Managed Detection and Response (MDR)
- Managed Endpoint Detection and Response (EDR)
- Extended Detection and Response (XDR)
- Application and Zero Trust Services

Managed Security Services

Continuous Risk Scanning

Tracking vulnerabilities is critical to identifying, remediating, and reporting on security vulnerabilities in systems and networks. Continuous Risk Scanning provides deep, contextual risk analysis to prioritize vulnerabilities for customer remediation.

Managed SIEM

Identifying threats through log analysis often means detecting one log out of millions produced daily that could be harmful or malicious. While some security solutions monitor certain systems or applications, security information and event management (SIEM) solutions provide visibility across the entire IT infrastructure. Alerts are monitored by experienced SOC analysts to determine the severity.

11:11 Recovery Solutions

Sometimes the worst-case cyberincident occurs, but downtime is not an option when your business could feel the impact of a disaster for years. 11:11 recovery solutions are designed with this in mind by putting the right people, processes, and technology in place so you have a quick and successful recovery.

Managed Detection and Response

The rapid growth of cyberattacks and distributed workforces have organizations reconsidering the tools they use to identify and respond to threats on their IT infrastructure. 11:11 Managed Detection and Response (MDR) enables you to get ahead of cybercrime.

Application and Zero Trust Services

Application and Zero Trust Services help mitigate cybersecurity risks, protect sensitive data, and ensure business continuity. They enhance network performance and security globally, optimizing web applications and APIs for improved speed and reliability. These services enforce a "never trust, always verify" mindset.

Managed Firewall

With Managed Firewall services, you immediately gain greater visibility into your network to help increase performance and guard against attacks. Built on industry-leading, next-generation firewall technology, and backed by an experienced Security Operations Center.

Extended Detection and Response (XDR)

XDR provides a complete cybersecurity solution with advanced threat detection, real-time monitoring, and expert oversight to protect against evolving threats. Using AI-driven analytics, multilayered defenses, and human expertise, it ensures proactive prevention, rapid response, and seamless IT protection. Scalable, cost-effective, and efficient, XDR helps businesses secure data, reduce risks, and stay compliant.

Need help managing other areas of your IT environment?

11:11 Systems has experts, consulting services, and solutions ready to help strengthen your entire organization so you can truly affect digital transformation across your network. We can help you ensure your systems and data are always running, accessible, and protected with disaster recovery, cloud, connectivity, and security solutions, as well as professional services.
