

## EVALUATE

Assess your infrastructure to simplify your cloud journey.

CATALYST

### Take inventory so you know exactly what you need.

In today's fast-paced IT environment, time and accuracy matter. Moving to the cloud can improve your organization's efficiency, reduce your costs, and speed up your time to market. But only if your cloud is designed for your unique needs. Over-provision your cloud environment and you risk paying more for resources you don't need. Under-provision your cloud solution and you risk impacting your application performance.

II:II Catalyst is designed to address these challenges. Catalyst is a lightweight software tool that can quickly take inventory of a global environment through VMware vCenter. Customers can use the tool to drag and drop or select individual workloads, resource pools, or VM groups for their specific use cases, including backup, replication (disaster recovery), and application migration/production environment.

### Detailed information to complete your cloud strategy.

II:II understands the importance and the challenges of planning and designing a cloud environment that meets performance and cost expectations. With Catalyst, we'll provide you the visibility and detail you need to give you a complete picture of your infrastructure. This will help you finalize your cloud strategy.

This critical information is key to giving you the ability to find the right cloud for your business — public cloud, private cloud, hyperscale cloud, or a hybrid of all of the above.

**RETHINK** CONNECTED

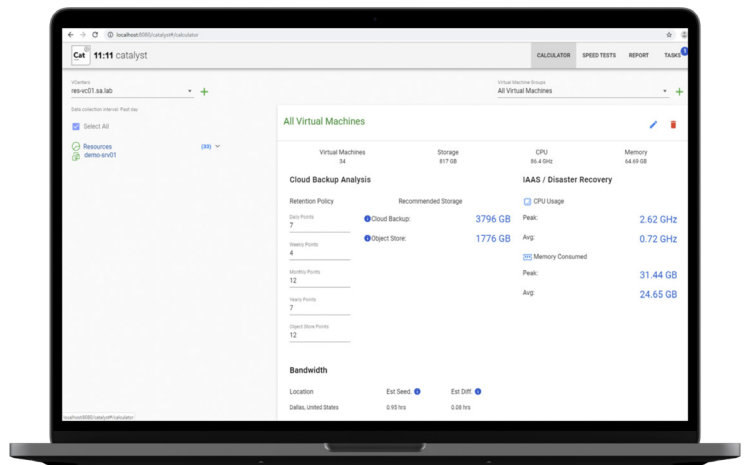

Accurately assess and model application performance and capacity requirements.

With Catalyst, you can simplify your cloud strategic planning. Best of all, this is a no-cost assessment tool. Before you begin any cloud migration project, reach out to your 11:11 account manager or solutions architect to assess your cloud and infrastructure needs.

Key Benefits:

- Model cloud sizing and capacity requirements based on real-time production data
- View how much storage, compute, and memory you will need in the cloud
- Leverage a built-in database of real-world usage patterns for accurate modeling of different scenarios
- Create custom groups for sizing individual workloads, applications groups, or different production sites
- Test your model and network capabilities with any 11:11 Cloud location to ensure an optimized experience
- Update workload bundles with estimates for data seeding or backup change rates
- Predict monthly usage costs using different usage scenarios including ad-hoc/disaster events enabling you to model your failover costs

Experience you can count on.

11:11 Systems brings together more than 20 years of experience in cloud, connectivity, security solutions. Whether you are considering cloud migration, management, or support of your mission-critical workloads, we can help you make informed decisions and streamline your cloud strategy.
