

PROTECT

Managed Security Services designed to improve awareness, reduce noise, and improve the security of your business.

MANAGED SECURITY SERVICES

Systems and people protecting your data 24x7x365.

Cybercriminals could strike at any time—and they only need to beat your defenses once.

These days, security is at the forefront of everyone's minds as we see daily escalating reports of security incidents. With the increasing complexity of traditional and multi-cloud infrastructures and high sophistication of today's cybercriminals, the need for dedicated security professionals to be highly trained and constantly focused is critical to ensuring proper protection of business-critical data.

With a robust family of Managed Security Services, we provide companies of any size the ability to prevent, detect, and respond to malicious activities, leaving IT departments free to focus on their business and only having to react to legitimate concerns.

II:II Systems Security Solutions Overview

Our security solutions protect your network from attackers, detect active malicious activities on endpoints, and identify risks across your infrastructure. With decades of cybersecurity experience, rely on our 24x7x365 Security Operations Center (SOC) to protect your infrastructure from malicious cyber attacks.

Our services include:

- Managed Firewall
- Continuous Risk Scanning
- Managed Security Information and Event Management (SIEM)
- Managed Endpoint Detection and Response (EDR)

Key Features:

- Customizable solutions for any size business
- Geographically redundant data centers
- Enterprise class security services
- Access to certified security engineers
- Protect any workload, any network, anywhere
- Extensive compliance certifications

Stay ahead of internal and external threats with 24x7x365 Managed Security Services.

Managed Firewall

With Managed Firewall services, you immediately gain greater visibility into your network to help increase performance and guard against attacks and unplanned downtime. Built on the industry-leading Fortinet FortiGate next-generation firewall platform, and backed by an experienced Security Operations Center, you can rest assured that your network, your employees, and your data are protected.

Managed SIEM

Identifying threats through log analysis often means detecting one log out of millions produced daily that could be harmful or malicious to an organization. While some security solutions monitor certain systems or applications, security information and event management (SIEM) solutions provide visibility across heterogeneous and distributed infrastructure components and end points for real-time monitoring to reduce the mean time to respond (MTTR).

Continuous Risk Scanning

Tracking vulnerabilities, as part of an organization's security strategy, is critical to identifying, remediating, and reporting on security vulnerabilities in systems and networks. Continuous Risk Scanning provides deep, contextual risk analysis to prioritize vulnerabilities for customer remediation to minimize an organization's "attack surface."

Managed EDR

The rapid growth of disruptive cyberattacks and highly distributed workforces have organizations reconsidering the tools they use to identify and respond to threats on their networks. Managed endpoint detection and response (EDR) enables you to get ahead of cybercrime, like ransomware, by reducing the time gap between detection and response. This not only improves a company's security posture by preventing and detecting threats on endpoints, but also by minimizing the impact of incidents.
