PROTECT

Improve awareness, reduce noise, and defend your business with 11:11 Managed Security Services.

MANAGED SECURITY SERVICES

Safeguard data with security backed by experts.

Cybercriminals could strike at any time—and they only need to beat your defenses once.

These days, security is at the forefront of everyone's minds. With the increasing complexity of cloud infrastructures and high sophistication of today's cybercriminals, the need for dedicated security professionals to be highly trained and constantly focused is critical.

With a robust family of Managed Security Services that mirrors the National Institute of Standards and Technology (NIST) Cybersecurity Framework, 11:11 provides organizations the ability to Identify, Protect, Detect, Respond, and Recover from malicious activities.

11:11 Systems Security Solutions Overview

Our security solutions protect your network from attackers, detect active malicious activities on endpoints, and identify risks across your entire IT infrastructure. With decades of cybersecurity experience, rely on our 24x7x365 Security Operations Center (SOC) to protect your infrastructure from malicious cyber attacks.

Our services include:

· Managed Firewall
· Continuous Risk Scanning
· Managed Security Information and Event Management (SIEM)
· Managed Detection and Response (MDR)
· Managed Endpoint Detection and Response (EDR)

Key Features:

· Customizable solutions for any size business
· Geographically redundant Security Operations Centers
· Enterprise class security services
· Access to certified security engineers
· Protection for any workload or network
· Extensive compliance certifications

Sec
Managed Security Services

Stay ahead of internal and external threats with 24x7x365 Managed Security Services.

Continuous Risk Scanning

Tracking vulnerabilities, as part of an organization's security strategy, is critical to identifying, remediating, and reporting on security vulnerabilities in systems and networks. Continuous Risk Scanning provides deep, contextual risk analysis to prioritize vulnerabilities for customer remediation.

Managed SIEM

Identifying threats through log analysis often means detecting one log out of millions produced daily that could be harmful or malicious. While some security solutions monitor certain systems or applications, security information and event management (SIEM) solutions provide visibility across the entire IT infrastructure for real-time monitoring to reduce the mean time to respond (MTTR). Alerts are monitored by experienced SOC analysts to determine the severity and notify customers when a response is necessary.

11:11 Recovery Solutions

Sometimes the worst-case cyberincident occurs, but downtime is not an option when your business could feel the impact of a disaster for years. 11:11 recovery solutions are designed with this in mind by putting the right people, processes, and technology in place so you have a quick and successful recovery to maintain your business and protect your data from cybercriminals.

Managed Firewall

With Managed Firewall services, you immediately gain greater visibility into your network to help increase performance and guard against attacks. Built on industry-leading, next-generation firewall technology, and backed by an experienced Security Operations Center, you can rest assured that your network, employees, and data are protected.

Managed Detection and Response

The rapid growth of cyberattacks and distributed workforces have organizations reconsidering the tools they use to identify and respond to threats on their IT infrastructure. 11:11 Managed Detection and Response (MDR) enables you to get ahead of cybercrime, by reducing the time gap between detection and response. This integrated solution improves a company's security posture by identifying threats more quickly and accurately through a multi-layered approach. Fewer incidents are missed that previously may have gone undetected.

Need help managing other areas of your IT environment?

11:11 Systems has experts, consulting services, and solutions ready to help strengthen your entire organization so you can truly affect digital transformation across your network. We can help you ensure your systems and data are always running, accessible, and protected with disaster recovery, cloud, connectivity, and security solutions, as well as professional services.
