

RECOVER

Get seamless cloud recovery when you need it most.

DISASTER RECOVERY FOR AZURE

Rest easy with fully managed, validated recovery in the Azure cloud.

When facing an IT crisis, time is of the essence and attention at a premium. You simply won't have enough of either to go around. Success in these tense moments, when the alarms are sounding and your adrenaline is pumping, requires more than just the right technology. True recovery combines the right technology with a trusted, tested set of plans, processes, and procedures, so you can confidently and seamlessly keep your organization up and running.

Keep your business running with 11:11 DRaaS for Azure.

11:11 Disaster Recovery as a Service (DRaaS) for Azure leverages our award-winning disaster recovery (DR) technology and expertise in the Microsoft Azure cloud. Easily migrate complete virtual machines (VMs) across a variety of supported recovery use cases, including from your on-premises environment to the Azure cloud, from the Azure cloud to your on-premises environment, or between different Azure cloud environments. From there, we will completely manage your DR from end to end, so you and your team can focus on delivering business value instead of worrying about recovery. In the event of a disaster or unplanned downtime scenario, we will not only failover your VMs to the desired Azure cloud region or the on-prem environment, but we will also validate recovery and debug VMs, if needed.

11:11 DRaaS for Azure simplifies recovery with a fully managed solution.

Key Benefits:

- Simplify DR with a fully managed solution based on your requirements.
- Limit downtime with automated, orchestrated failover.
- Protect your organization, applications, and data with an SLA designed to meet your RTOs.
- Ensure recovery with test planning, execution, and follow-up reports.
- Streamline costs with a pay-as-you-go model.
- Scale to meet your organizational needs.

11:11 DRaaS for Azure includes:

- DRaaS design and implementation
- Technology for replication and continuous data protection in the Azure cloud
- Application-level failover and recovery validation
- Maintenance and 24x7x365 support
- Managed Recovery Testing
- Service Level Agreement (SLA) to meet your recovery time objectives (RTOs)
- Support for VMware and Hyper-V environments
- Global availability

Never assume resiliency.

To better safeguard your environment and streamline internal processes, consider these potential use case:

Protect your organization from unplanned downtime and recover from a range of potential threats, including regional outages, application errors, ransomware attacks, and more.

Outsource DR management and free up time for your internal team to focus on strategic goals and business innovation.

Streamline IT management and ensure interdependent applications can be recovered safely and quickly.

Increase IT resiliency with a fully managed solution, customized failover plans as well as simplified testing and reporting.

Need help managing other areas of your IT environment?

11:11 Systems has experts, consulting services, and solutions ready to help strengthen your entire organization so you can truly effect digital transformation across your network. With the right cloud, connectivity, and security solutions as well as professional services to assist your internal IT teams, we can ensure your systems and data are always running, accessible, and protected.
