EVALUATE

Assess your infrastructure before beginning a new phase in digital transformation.

Cat
Catalyst

Take inventory so you know exactly what you need.

In today's fast-paced IT environment, time and accuracy matter. Moving to the cloud can improve your organization's efficiency, reduce your costs, and speed up your time to market. But only if your cloud is designed for your unique needs. Does this external environment add risk with unknown vulnerabilities? Understanding these vulnerabilities is the first step to cyber resiliency.

11:11 Catalyst is designed to address these challenges. Catalyst is a lightweight software tool that can quickly take inventory of a global environment. Customers can use the tool to drag and drop or select individual workloads, resource pools, or VM groups for their specific use cases, including backup, replication (disaster recovery), and application migration/production environment. The tool also allows you to perform a single no-cost vulnerability scan to help better understand cyber risks to your external environment.

Understand your storage and security needs.

11:11 understands the importance and the challenges of planning and designing a cloud environment that meets performance and cost expectations. With Catalyst, we'll provide you the visibility and detail you need to give you a complete picture of your infrastructure. This will help you finalize your cloud strategy.

With the vulnerability risk assessment scan you will have immediate visibility to external risks. A report will be generated that will identify vulnerabilities to better understand your cyber security needs.

This critical information is key to understanding risk and giving you the ability to find the right cloud for your business — public cloud, private cloud, hyperscale cloud, or a hybrid of all of the above.

**THE RESILIENT
CLOUD PLATFORM**

11:11 SYSTEMS

Accurately assess vulnerabilities and capacity requirements.

Cat

Catalyst

With Catalyst, you can simplify your cloud strategic planning and quickly understand risks to your external infrastructure. Best of all, this is a no-cost assessment tool. Before you begin any cloud migration project, reach out to your 11:11 account manager or solutions architect to assess your cloud and infrastructure needs.

Key Benefits

Model cloud sizing and capacity requirements	Leverage a built-in database of real-world usage patterns for accurate modeling
View how much storage, compute, and memory you will need in the cloud	Create custom groups for sizing workloads, applications groups, or production sites
Predict monthly usage costs using different usage scenarios including ad-hoc/disaster events	Test your model and network capabilities with any 11:11 Cloud location
Be better prepared to remediate harmful cyber incidents	Update workload bundles with estimates for data seeding or backup change rates

Know your vulnerabilities with a scan report that provides actionable analysis for your external-facing environment.

Need help transforming other areas of your environment?

As external and internal threats continue to evolve, so does our multi-layered, integrated approach to protecting data. While there is no way to guarantee complete immunity from potential data breaches, 11:11 security experts, consulting services, and solutions are ready to help strengthen your security posture and plug potential vulnerabilities.
