Take database management off your to-do list.

Get proactive management, monitoring, and support for your database environments.

Today's IT departments are being asked to do a lot more with a lot less. Responsible for supporting increasingly complex and critical systems alongside a plethora of internal projects, many are left feeling overworked and overwhelmed. As a result, they have little or no time to focus on what matters most: delivering business value.

11:11 Managed Database Services were designed to alleviate this burden, empowering your internal IT teams with the freedom to refocus their efforts on more critical projects and business objectives.

Our solution allows you to fully outsource the management of your Microsoft SQL, Oracle, Amazon RDS or other database infrastructure, whether your databases are in public cloud platforms, the 11:11 Cloud, or your own data center—virtually anywhere. This helps you ensure your databases are always optimized, updated, and available.

You don't have to do it all.

With 11:11 Managed DB Services, your IT team is free to extend and innovate—not spin cycles managing tedious tasks. We'll take care of proactive administration, monitoring, reporting and support.

From the initial installation, configuration, and onboarding to patch management with world-class process automation, fault resolution and, of course, 24x7x365 monitoring, our team can deliver full operational management of your databases. With optional consulting services we can help fill in the gaps, no matter what your business requires.

11:11 Managed DB Services simplifies, streamlines, and secures database management.

Key Benefits:

Reduce the complexity of DB operations.

Reduce operational costs, while freeing IT resources to focus on core business.

Clone databases for simple testing, development, and migrations.

Stay ahead of the curve with database environments that are always optimized, updated, and running at peak performance.

Enhance DB and OS security and reduce downtime with automated updates, patch management, and advanced threat detection.

Collaborate with a team of experienced IT professionals, who have specialized knowledge in DB management.

Additional features:

- Supports Microsoft SQL Server, Amazon RDS, Azure SQL Database, Oracle Database, PostgreSQL, MySQL, Google Cloud SQL, and more.
- Comprehensive and seamless Onboarding
- Proactive DB management
- Competitive, transparent pricing
- Optional consulting services
- 24x7x365 monitoring
- Priority support
- Global availability

Modern solutions for modern businesses.

As IT environments become increasingly more complex, many IT teams are struggling to stay ahead of the curve. When it comes to DB and OS management, updates and patches are critical, but also particularly difficult to proactively maintain when time and resources are limited.

With 11:11 Managed DB Services we'll work with you to keep your database environments up-to-date with the latest features and security patches, while also ensuring database scalability, disaster recovery, and reduced configuration risks. Thanks to automation, we can also add significant business value through intelligent observability of potential problem areas, such as identification of critical day-zero vulnerability patches.

Need help managing other areas of your IT environment?

11:11 Systems has experts, consulting services, and solutions ready to help strengthen your entire organization so you can truly effect digital transformation across your network. If you have gaps within your IT infrastructure you can easily add consulting services to make any necessary improvements. With the right solutions and professional services to assist your internal IT teams, we can help you modernize, protect, and manage your entire environment through our resilient cloud platform.
