Next-Generation Firewall Protection

Preventing intruders from infiltrating your business network is your first line of defense. But as cybercriminals become more sophisticated, traditional firewalls and networking teams can struggle to keep up with attacks. Securing the network edge now requires stronger protection against phishing, distributed workforces, unsafe web content, and constantly evolving threats.

With 11:11 Managed Firewall — Palo Alto Networks, you get greater visibility across your network to help improve performance and defend against attacks and unexpected downtime. Built on Palo Alto Networks' next-generation firewall technology, and supported by our 24x7x365 expert management and monitoring, your network, employees, and data stay secure and protected.

Managed by 11:11. Monitored 24x7x365. Designed for secure connectivity and resilient operations.

Unified Threat Management	Threat Prevention / IPS
Advanced URL Filtering	Secure Remote Access
Network Anti-Virus /Anti Malware	Intrusion Detection and Prevention

Next-generation firewall protection backed by 11:11 Systems' Security Operations Center (SOC).

Fw

Managed Firewall

Unified Threat Management/Advanced Protection

Identify, block, and respond to threats with Palo Alto Networks security services, including IPS, antivirus, and WildFire protection. Subscriptions required.

Network Security/Intrusion Detection and Prevention

Configure policies, NAT, DHCP, VPNs, routing, VLANs, DMZs, and segmentation. IPS helps detect and mitigate common attacks.

Web / Content Filtering

Block or screen unsafe or inappropriate web content based on corporate policies and security requirements.

Secure Remote Access

Protect remote access with local, RADIUS, LDAP, or SAML authentication.

Visibility and Operational Control

Access security, hardware, and bandwidth reports through the 11:11 Console, plus automated backups and change tracking.

Flexible Deployment and Resilience

Choose physical or virtual firewalls, customer- or 11:11-provided hardware, high availability, and optional SD-WAN management.

Included Services:

Monitoring and alerting

- Proactive ICMP monitoring
- SNMPv3 health monitoring
- Performance and utilization
- Security events and escalation
- Trending and analysis

Support and maintenance

- 24x7x365 support
- Network Operations Center management
- Firmware upgrade coordination
- Configuration backup and change tracking
- Change support

Reporting and metrics

- Security analysis reporting on request
- Hardware and bandwidth utilization
- Threat, compliance, and regulatory reporting
- Up to 90 days active / 365 days archive retention on a best-effort basis

Need help transforming other areas of your environment?

11:11 Systems has security experts, consulting services, and solutions ready to help strengthen your security posture and plug potential vulnerabilities, from assessments and business impact analysis (BIA) to backup and disaster recovery services, business continuity plan development, and everything in between. We can help ensure your entire organization is cyber resilient.
